Debugging and observability

Structured logs carry request/run context. Prometheus metrics expose API, workflow, model fallback, and rate-limit behavior. Run History and Cockpit expose node failures. Retrieval traces explain query/filter/search stages. Cost records preserve intended versus actual model use.

Debug from narrowest layer outward: schema/preflight → node unit → API/store integration → UI component → Playwright → live provider smoke.

File	Responsibility
app/observability/logging.py	Logging module.
app/observability/metrics.py	Prometheus metrics for the agentic workflow platform.
